

# Set Decimal Price for M1

(Magento 1.x)

## Magento Extension User Guide

Official extension page: [Easy Template Path Hints - MageGadgets Extensions](#)

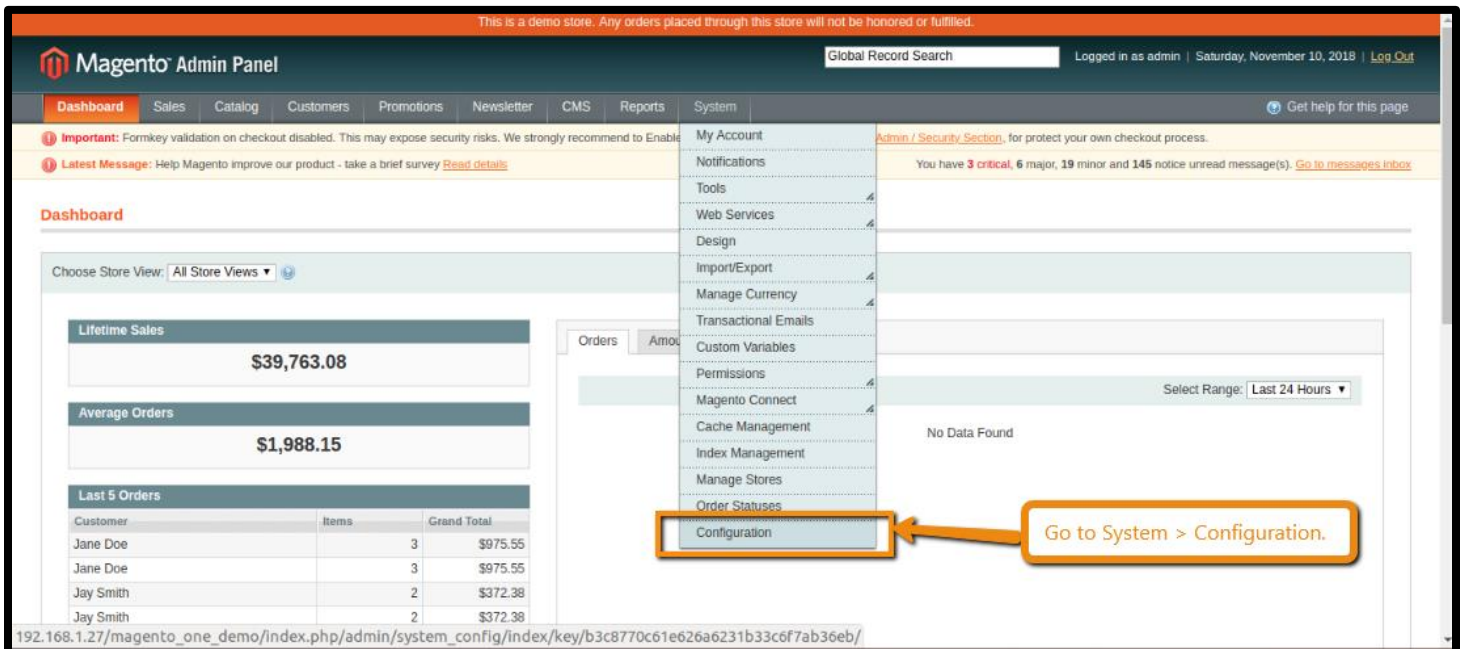

# Set Decimal Price for M1 Documentation

## 1. Key Features:

- a – Easy to Install .
- b – Easy to Use.
- c - Result will be shown on all pages like checkout , product view as well as category page.
- d - Set a different value between 0 and 4 to change the price precision. 0 means no decimals will be displayed.

## 2. All settings are available admin:

Go to Admin -> Store -> Setting -> Configuration > Magegadgets > Set Decimal Price.

In System > Configuration > Catalog > Catalog > Price, this extension adds a new option: Price Precision

The screenshot shows the Magento Admin Panel interface. At the top, there's a navigation bar with 'System' highlighted. Below it, a 'Catalog' configuration page is visible. The 'Price Precision' field is set to '2' and is highlighted with an orange box. A callout box with an arrow points to this field, containing the text: 'You can set "Number of price decimals" like 1,2,3. Maximum is 4.' The 'Catalog Price Scope' is set to 'Global'. The left sidebar shows the 'Configuration' menu with 'GENERAL' expanded.

## Avoiding side effect:

If Price Precision is changed in default scope, it will affect administration area in some ways. For instance, in Sales > Orders management, Order Totals section will be affected.

To avoid this behavior, let Price Precision unchanged (value = "2") in \_\_default scope \_\_and change its value in website scope, for each website you have (or in "store view" scope if needed).

## Incomplete case:

On product detail page of a configurable product, there are drop-down lists (one per attribute), to choose product options. Some options may vary the final price. In this case, the price difference is written into the option label (e.g.: +€50.00 or -\$20.00). For these prices, the number of decimals is hard-coded in configurable.js and product.js files. This case is not managed by this extension.
